

Problem Statement:

While there are many apps/websites that track gas prices there are none that would give recommendations based on the vehicle make, model and year along with real-time updates to prices alone with directions to the best gas station nearby.

Who is experiencing the problem:

Everyone who drives gas-powered cars, especially those who are always looking to save an extra dollar and want to find the best fuel prices quickly such as people taking road trips or commuters

What is the problem:

The problem is that drivers struggle to find up-to-date gas prices and the best gas stations for their specific vehicle requirements, leading to wasted time and money while refueling.

Where does the problem present itself:

The problem presents itself in situations where drivers need to refuel, such as during daily commutes, road trips, or when traveling in unfamiliar areas, particularly when they encounter multiple gas stations with differing prices.

Why does it matter:

Being able to find affordable gas is important for all for helping being able to reduce travel expense by providing an solution that would offer real-time prices personalized recommendations so that both money and time are being saved
